Finally a Sage 100 ERP Solution For Packers

OVERVIEW

IF you're tired of running your business on a combination of old, outdated software and spreadsheets

IF you need up-to-date information about where product is and where its going

IF you want to streamline and connect grower accounting to your operations

IF you must have full product traceability from 'Field to Fork'

IF you want true cost analysis from the field through the packing process

THEN IT'S TIME TO STEP UP TO
**CRESCENT FOOD MANAGEMENT
SOFTWARE**

Based on Sage Software, an industry-leader in Enterprise management and accounting software, the Packer/Shipper Management software provides streamlined operational processes that utilize barcode scanning technology that seamlessly feed invoicing and grower accounting systems.

With a 'more than just software' approach, ICS brings in-depth knowledge of the highly demanding agricultural distribution environment.

CASE STUDY

UESUGI FARMS

CHALLENGES

Uesugi needed the ability to do the following:

- ◆ Field-to-Fork traceability from receiving through packing to shipping
- ◆ Anticipated sellable inventory updated in real-time
- ◆ Production information collected on a real-time basis
- ◆ Grower accounting with buyer invoicing and grower invoicing tightly integrated
- ◆ Real-time inventory movement and traceability
- ◆ Fast-paced, high-volume billing and payables
- ◆ Single point of entry integration with the company's ERP system

SOLUTIONS

The following are just some of the solutions ICS provided them:

- ◆ Receiving by field ID and transportation Tag with a system-generated lot code
- ◆ Lot details are captured during the receiving process per user-defined criteria
- ◆ Capture receipts as they occur, production data directly from the shop floor, and shipments as they are loaded.
- ◆ Packed product lot codes are system-generated consistently across production lines
- ◆ Inventory can be transferred from location to location in real-time using barcode and scanning technology
- ◆ Invoices are created automatically from the Shipping process eliminating errors and delays
- ◆ Inventory and production transactions are verified within the ERP system and posted to the ERP system in real-time
